

Education

Texas A&M University

PH.D. IN MECHANICAL ENGINEERING (TRANSFER STUDENT), GPA: 4.0/4.0

College Station, TX, USA

Aug. 2018 - May. 2021

Stony Brook University

PH.D. CANDIDATE IN ELECTRICAL AND COMPUTER ENGINEERING, GPA: 3.9/4.0

Stony Brook, NY, USA

Aug. 2015 - Aug. 2018

University of Science and Technology of China

B.S. IN APPLIED PHYSICS, GPA: 3.71/4.3

Hefei, Anhui, China

Aug. 2011 - Jun. 2015

Skills

Software Embedded C(4yrs), Python(3yrs), Matlab(6yrs), Assembly(1+yrs), \LaTeX (5yrs), C++(1yr), Java(1yr)

Linux System(2yrs), ARM Cortex-M Microcontroller Driver Development(3yrs), Microcontroller Interfaces (ADC, GPIO, I2C, SPI, UART)(3yrs), Version Control (Git)(3yrs), ARM GNU toolchain(1yr), Automated Test Frameworks, Low

Skills Power Embedded System Development, Qt Development, VLSI Design, Digital Signal Processing, Data Structures & Algorithms(1+yrs), Machine Learning(3yrs), Electrical Schematic Design (OrCAD, Altium, Eagle)(2yrs), Wireless Communication (BLE, RF, Zigbee)(1yrs), Sensors (Infrared, Optical, Camera)(5yrs)

Work Experience

Embedded Software Engineer Intern

MARVELL SEMICONDUCTOR INC.

Marlborough, MA

Jun. 2020 - Aug. 2020

- Integrated an automated test framework, RobotFramework, to test the behavior of a remote provision tool developed for Marvell SoCs.
- Designed over 100 and implemented over 40 test cases in Python and RobotFramework, that cover the functionality test, multi-threading test, performance test, and memory test.
- Wrote Shell scripts to assist test automation in Linux environment. Wrote automated test scripts to generate reports.
- Used version control tool (Gerrit) to collaborate with teammates.
- Implemented the data structures and APIs using C language for a communication protocol between a server and Marvell SoCs.

Research Experience

Liquid Crystal Optical Shutter on Passive Infrared Sensor for True Presence Detection

RESEARCH ASSISTANT, ADVISOR: DR. YA WANG

College Station, TX, USA

Aug. 2018 - May. 2021

- Solved the common issue that all commercial motions sensors (PIR sensors) could not detect stationary occupants.
- Devised a Polymer Dispersed Liquid Crystal (PDLC) infrared shutter that can modulate long-wave infrared radiation with low driving voltage and ultra low power consumption.
- Developed a synchronized low-energy electronically-chopped PIR sensor for true presence detection by applying the created LC shutter to a PIR sensor and being packaged in an ultra low power embedded system.
- Designed electrical schematic of the sensor node (Altium) and soldered the PCB board.
- Developed embedded C programs in ARM microcontrollers with interfaces (ADC, GPIO, I2C, SPI, UART).
- Used ARM toolchain to develop and compile embedded software on ARM cortex-M microcontrollers.
- Applied version control tool (Git) to collaborate with teammates.
- Extracted statistical features in Python language and ran machine learning algorithms with toolbox (scikit-learn) for presence detection.
- Reached 99.9% accuracy for true presence detection and over 97.7% accuracy for realistic, long-term test.

SLEEPiR Sensor Network for Human Presence Detection in Residential Buildings

College Station, TX, USA

RESEARCH ASSISTANT, ADVISOR: DR. YA WANG

Dec. 2019 - May. 2021

- Built a wireless sensor network using Bluetooth Low Energy (BLE). Each end device contains an ARM microcontroller and multiple sensors, including SLEEPiR presence sensor, motion sensors and temperature/humidity sensor.
- Implemented a hub using Raspberry Pi (Linux system) that receives report from end devices and controls smart thermostats via a cloud service.
- Used Qt to develop a GUI to visualize collected data.
- Used version control tools (Git) on Linux platform to collaborate with teammates.
- Developed an adaptive detection algorithm with the thermal model of the sensor node.

Compressive Sensing for Human Localization Using Single Thermopile Pixel Sensor

College Station, TX, USA

RESEARCH ASSISTANT, ADVISOR: DR. YA WANG

Aug. 2018 - Mar. 2019

- Designed a random binary mask to compress the radiation within the field of view (FOV).
- Integrated one thermopile sensor and rotating optical mask to acquire compressive infrared signals from human.
- Wrote embedded C software on embedded systems to control the stepper motor and collect sensor's data via I2C interface.
- Built a physical model that shows the linear relationship among the output signal of sensor, the rotating mask and radiation distributions. Found the relationship could be solved by compressive sensing theory.
- Used Matlab to reconstruct spatial radiation distributions with basis pursuit denoising algorithm.
- Reached over 90% accuracy for localization of indoor the human object with a very low cost (less than \$10).

Co-Mentor of Senior Design Project: Occupant-centered Light and HVAC Control Using Machine Learning for Human Comfort and Energy Efficiency

College Station, TX, USA

RESEARCH ASSISTANT

Fall 2019

- Guided and managed the team to build a lighting and HVAC control system under \$100 budget.
- Generated a Gantt chart to track the progress of the project. Assigned different tasks based on the skills of the team members.
- Gave guidance of selecting proper hardware (MCU, sensors, wireless communication), design concepts (mechanical and electrical), user-centered product development, and software development (reinforcement learning).

Passive Infrared Sensor for Indoor Localization and Tracking

Stony Brook, NY, USA

RESEARCH ASSISTANT, ADVISOR: DR. YA WANG

Sept. 2017 - Mar. 2018

- Used a single passive infrared (PIR) and an optical shutter embedded with microcontroller unit (MCU) in the device to analyze the occupancy status of the indoor environment, such as presence, localization, and facial direction.
- Utilized an innovative rotating optical shutter in front of the PIR sensor to modulate the infrared radiation in a nonlinear manner. Built a physical model that shows the relationship between the output signal and the mechanical shutter.
- Wrote embedded C software on embedded systems to control the servo motor and collect PIR's data via ADC interface.
- Extracted two features using Python from the output signals from PIR sensors (peak to peak value, and pulse width).
- Applied machine learning methods (SVM and Neural Network) with Python language to improve the performance in predicting and classifying occupancy situations that reached 98% accuracy in localization.
- Extended the functionality of PIR sensors in indoor occupancy detection with high performance, such as human tracking with 0.44 m RSME, localization with 98% accuracy and facial direction detection with 83% accuracy.

Long-term True Presence Detection Platform

Stony Brook, NY, USA

RESEARCH ASSISTANT, ADVISOR: DR. YA WANG

Jan. 2018 - Jun. 2018

- Utilized the low-power Lavet stepper motor ($< 10\text{mA}$) to drive a mechanical optical shutter on PIR sensors for true presence detection that could detect both stationary and moving occupants.
- Built a long-term experiment platform consists of Raspberry Pi (Linux system), Pi camera, shuttered PIR sensors and a microcontroller.
- Used computer vision algorithms (YoLo and R-CNN) on videos to extract presence information as groundtruth.
- Reached 97% accuracy for classifying occupied and unoccupied scenes from 31-hour experiment.

VLSI Course Project: VLSI Design for 8-bit Adder

Stony Brook, NY, USA

INSTRUCTOR: DR. EMRE SALMAN

Fall 2016

- Developed an 8-bit CSA adder with 45nm CMOS technology using Cadence software. The final design showed low power of 1.184 mW, low area of $1257\ \mu\text{m}^2$, and high speed of 4.34 GHz.

Stony Brook University, Department of ECE

Stony Brook, NY, USA

TEACHING ASSISTANT

Aug. 2015 - Dec. 2017

- Embedded Microprocessor Systems Design: Developed software in Assembly language on microprocessors
- Digital Systems Design: Microcontroller interfaces (ADC, GPIO, I2C)
- Digital Signal Processing Theory: Matlab for DSP algorithms

Certification

Online Course Certificate	Machine Learning (Cousera), Deep Learning Specialization (Cousera), Embedded Linux Step by Step using Beaglebone Black (Udemy), Mastering RTOS: Hands on FreeRTOS (Udemy), Mastering Microcontroller with Driver Development (Udemy)

Honors & Awards

- 2019 **Graduate Student Travel Award**, J. Mike Walker '66 Department of Mechanical Engineering
- 2019 **Graduate Excellence Scholarship**, J. Mike Walker '66 Department of Mechanical Engineering
- 2013 **Bronze Medalist**, Outstanding Undergraduate Scholarship
